Challenge

Before implementing StarWind HCI Appliance (HCA), Flagler County Schools faced a significant challenge with their IT infrastructure due to budgetary constraints. Although their existing Nutanix setup using the ESXi hypervisor was performing well, the high costs associated with maintaining and expanding this infrastructure were becoming unsustainable for the school district.

With a limited budget, it was essential to find a more cost-effective solution without compromising performance. Improving its security posture added another layer of complexity to the district's situation.

Solution

Flagler County Schools chose StarWind HCI Appliance for its strong reputation for high performance and cost-effectiveness. The transition to StarWind HCI Appliance was seamless, delivering the same performance as their previous Nutanix setup but at a significantly lower cost. This cost savings allowed the district to reallocate funds toward enhancing its security measures.

The new infrastructure met all performance and reliability requirements, providing an efficient and effective solution for the district's needs. Future expansion plans involve scaling the infrastructure with additional StarWind HCI Appliances as needed.
