

# Geyma Sistemas de Informacion SL increases business efficiency in delivering its services by creating a highly available IT infrastructure around **StarWind Virtual SAN**

## About the Company

Geyma Sistemas de Informacion SL, based in Barcelona, Spain, is a technology-focused company specializing in virtualization, cloud solutions, security, and maintenance. Established in 2000, Geyma's mission is to help businesses achieve their goals while minimizing costs through advanced technological solutions.

## Industry

IT & Services

## Location

EMEA (Spain)

## Solution

StarWind Virtual SAN (VSAN)

*"The infrastructure with StarWind works perfectly and satisfies all the requirements."*

**Gerard Juárez, CEO**

## Challenge

Before deploying StarWind Virtual SAN (VSAN), Geyma Sistemas de Informacion SL relied on Dell servers with Microsoft's virtualization solution on top. However, this setup had become obsolete, leading to performance bottlenecks, reliability issues, and inadequate high availability (HA) features, all of which were critical for its operations.

The company decided to scour the market for a reliable solution that would satisfy its virtualization needs.

## Solution

Geyma Sistemas de Informacion SL has chosen StarWind VSAN because of its proven track record and the quality of its storage solutions. StarWind VSAN provided a fresh focus on the IT infrastructure, delivering enhanced HA and improved performance that aligned perfectly with the company's needs.

The implementation of StarWind VSAN transformed the outdated infrastructure into a robust, high-performing system that exceeded all expectations, fully satisfying Geyma's requirements for virtualization, cloud integration, and security.
