Jazz ensures uninterrupted telecommunications services delivery by centralizing storage management and streamlining backup processes with StarWind Virtual SAN (VSAN)

About the Company

Jazz is Pakistan's digital operator and the largest internet and broadband service provider with over 70 million subscribers nationwide.

Industry

Telecommunications

Location

APAC (Pakistan)

Solution

StarWind Virtual SAN (VSAN)

"The performance of the StarWind solution is up to the mark. It provides complete features at less cost."

IT Developer

Challenge

Before deploying StarWind Virtual SAN (VSAN), Jazz operated within a hypervisor environment using ESXi but lacked centralized storage management and efficient backup scheduling. This resulted in time-consuming manual backups and a lack of disaster recovery preparedness.

The company was looking for a cost-effective shared storage solution to resolve the scalability and performance concerns of its old infrastructure.

Solution

Jazz selected StarWind VSAN for its cost-effectiveness and promised features, which aligned with the company's needs. With StarWind, Jazz achieved centralized storage management and streamlined backup scheduling, allowing for easier disaster recovery preparations from a single console.

StarWind's highly scalable solution addressed Jazz's concerns regarding scalability and performance, providing ease of use and satisfactory performance. The resulting infrastructure met all requirements, offering robust features at a lower cost.
