Solution

StarWind HCI Appliance (HCA)

"Thanks to StarWind HCI Appliance, we now have a failover cluster in place to allow redundancy. Everything works as expected. The setup was a breeze."

Alex Hernandez,
Company Representative

Challenge

Before deploying StarWind HCI Appliance (HCA), Serenity Insurance relied on a single Dell PowerEdge T610 server that had been in operation for over eight years. This aging infrastructure lacked redundancy, putting the company at risk of downtime in the event of hardware failure. This situation made it difficult for the company to ensure business continuity, which is critical in the insurance industry where uninterrupted service is paramount.

Serenity Insurance needed a solution that could provide the necessary reliability without the complexity and cost of purchasing additional storage systems.

Solution

Serenity Insurance selected StarWind HCI Appliance (HCA) because it offered the needed failover clustering and infrastructure redundancy, ensuring its operations could run without interruption. StarWind HCI Appliance transformed its infrastructure by introducing a highly available (HA) environment, greatly enhancing the reliability of its IT infrastructure. The deployment process was smooth, and the new system worked as expected, providing the reliability that was previously lacking.

With StarWind HCI Appliance, the company now enjoys a stable, high-performing infrastructure that supports its business continuity needs.
