Doing IT right the first time

About the Company

Sibergen Technologies was established by a group of engineers as an "all-in-one IT shop" tailored to meet the companies' dedicated IT needs through innovative managed services like strategic IT consulting, on-site, or cloud-based IT management, and various IT support services.

Industry

IT & Services

Location

North America (United States)

Solution

StarWind HCI Appliance (HCA)

"StarWind HCI Appliance delivered a solid hyperconverged platform and met all requirements, including IOPS."

Mike Leonard, CEO

Challenge

Before deploying StarWind HCI Appliance (HCA), Sibergen Technologies was operating with an aging non-virtualized IT environment that could no longer meet the growing demands of the company. The outdated infrastructure led to frequent performance bottlenecks, increased downtime, and higher maintenance costs.

The lack of virtualization also limited the company's ability to optimize resource utilization and streamline IT management. As the business expanded, the need for a more scalable solution became evident.

Solution

Sibergen Technologies selected StarWind HCI Appliance (HCA) because it provided the required stability and performance without making its IT environment too complicated. StarWind HCI Appliance offered a turnkey solution, combining compute, storage, and networking in a single, easy-to-manage platform. This integration enabled Sibergen Technologies to achieve significant improvements in performance and reliability while reducing the total cost of ownership.

With StarWind HCI Appliance, Sibergen Technologies now enjoys a robust and scalable infrastructure that supports its business growth and enhances service delivery to its clients.
