Solution

StarWind HCI Appliance (HCA)

"StarWind HCI Appliance is great. It's simple, fast, and quick to deploy."

Nick Casagrande, IT Director

Challenge

Before implementing StarWind HCI Appliance (HCA), Southwest Waste Services LLC had an outdated IT infrastructure, relying on a traditional 3-tier architecture and using the ESXi hypervisor. Its systems were cumbersome to manage and prone to performance bottlenecks. There was also the challenge of maintaining efficiency and scalability for an obsolete IT environment.

The company sought a solution that could streamline operations and improve overall performance without disrupting its daily activities.

Solution

Southwest Waste Services LLC turned to StarWind HCI Appliance as it offered a simpler, faster, and more efficient alternative to the traditional infrastructure model. Its intuitive interface and rapid deployment capabilities meant minimal downtime during implementation and simplified ongoing management. With StarWind HCI Appliance, Southwest Waste Services gained a scalable and fault-tolerant infrastructure that could seamlessly integrate with its existing ESXi environment.

StarWind's solution has improved performance and reduced operational overheads, allowing the IT team to focus on strategic initiatives. The company plans to further enhance its infrastructure by adding a third ESXi node.
