North America (United States)

Solution

StarWind Virtual SAN (VSAN)

"We picked StarWind because it was very cost-effective and proved to do a great job of backing up our systems. It's been great at backing up our data to an off-site location."

Brian Witherow, IT Director

Challenge

Before deploying StarWind Virtual SAN (VSAN), Tipton Community School Corporation faced a significant challenge with its IT infrastructure. The primary concern was the lack of an off-site backup solution, which left its critical data vulnerable to local disasters and system failures. Despite using NetVault Backup, the absence of a reliable off-site backup system posed a constant threat to data security and operational continuity.

The school corporation needed a cost-effective, efficient, and reliable solution to safeguard its data and ensure uninterrupted access to educational resources.

Solution

Tipton Community School Corporation chose StarWind VSAN for its cost-effectiveness and proven performance. With StarWind VSAN, the school corporation successfully established a robust off-site backup system, significantly enhancing its data protection and disaster recovery capabilities.

Moving forward, Tipton Community School Corporation plans to continue using StarWind VSAN in its current capacity, confident in the enhanced security and reliability it brings to its IT infrastructure.
